

ABBOT DESIGN · GEOTECH REPORT ENGINE

Quick manual — one page, everything you need

WHAT IT IS

A web app that installs like a normal app on your phone, tablet or computer. You fill in the report section by section — on site or back at the office — and it builds the certifier-ready PDF for you: cover, contents, numbering, appendices, the lot. **Everything saves automatically as you type, even with no phone signal.**

INSTALL ONCE ON EACH DEVICE

iPhone / iPad (Safari)

1. Open the web address below in Safari
2. Tap Share (square with ↑ arrow)
3. Tap “Add to Home Screen”, then Add

Android (Chrome)

1. Open the web address in Chrome
2. Tap the ⋮ menu (top right)
3. Tap “Add to Home screen” / “Install app”

Windows / Mac (Chrome or Edge)

1. Open the web address in the browser
2. Click the install icon at the right end of the address bar (a screen with ↓)
3. Click Install

Web address: clairethetester.github.io/abbot-geotech-report-engine After installing, it opens from your home screen like any app and works without internet. This manual is always available from the ? Help button in the app.

WHAT IT DOES

- Three report types: Desktop assessment, Classification + Wind, Comprehensive investigation
- Fill sections in order with Next, or jump anywhere using the tabs
- Take site photos straight into the appendix, captions and all
- Upload the lab or DCP results PDF — its pages drop into Appendix C automatically (site-plan PDFs do the same into Appendix A)
- Signatures are drawn on screen — no printing and scanning
- The PDF carries a big DRAFT watermark until the report is properly issued — nothing half-finished can reach a client unmarked

THE WORKFLOW

1 Draft — fill everything in. Waiting on the lab? Tick “Results still pending” (Results page); the report cannot be issued while it’s ticked.

2 Author — sign on the Review page and press Submit for review.

3 Reviewer — sign, or press Request changes to send it back.

4 Issue — from the Preview screen; the watermark comes off.

5 Print — Preview → Print / Save as PDF (choose “Save as PDF” as the printer).

Any edit after submitting returns the report to draft. Any edit after issuing reopens it as a new draft revision — an issued PDF can never quietly drift from the data.

THINGS TO BE AWARE OF

- **Reports live only on your device.** There is no cloud copy yet. Export important reports regularly (Home → Export).
- **Moving a report to another device (e.g. tablet → office computer for review):** Home → Export saves a .json file → email or AirDrop it → on the other device, Home → “Import a report”.
- **Don’t clear your browser’s history/site data** on this app — that deletes your reports. Export first if you must.
- **Photos:** use JPEG. iPhones: Settings → Camera → Formats → “Most Compatible” (HEIC photos won’t load).
- **PDF uploads:** the first PDF you convert needs an internet connection once; after that it works offline too.
- **Deleting a report cannot be undone.** The app asks first — take it seriously.
